

SIO2IDE WITH CF CARD

I was asked many times about this type of connection because CF cards are small, cheap and quiet. Additional are low power consuming and with proper card don't require additional power.

But here is a question, which one CF2IDE adapter to use and with which one CF card ?

1. CF2IDE adapter

I was always trying to use quite cheap and not complicated adapters. Mostly with additional power socket and option to choose voltage level which will be provided to your card.

This is very basic CF2IDE adapter and it works well with SIO2IDE controller.

You can buy it on ebay for few dollars or few pounds.

2. Compact Flash card

Remember, always use good quality CF card. I always use Kingston brand and it always works. Below are cards with which one I personally tested this CF2IDE adapter and can say that it works. Additionally these CF cards are using voltage 3.3V and don't need additional power.

Don't forget to choose proper voltage on your CF2IDE adapter, otherwise you will burn your card !!!

I'm sure that other Kingston cards will work well.

If you experience some problems try to provide additional power to your CF2IDE adapter. Try to use smaller partition (only FAT of course) and don't put too much files for first time.
