

SIO2IDE SIO CABLE

QUICK HOWTO

Because of problems with SIO plugs we are offering SIO2IDE with no SIO cable (most times). Many people have spare SIO plugs or SIO cables in home and they can use it to make SIO2IDE SIO data transmission cable.

Connection diagram looks very easy:

Locate on SIO2IDE motherboard connector named **SIO_IO** (it is located next to chip U3). Use this connector to connect your SIO2IDE to Atari. Build you cable according to diagram provided in User Manual and in this guide.
